

DESIGN AND FABRICATION OF CUSTOM MACHINES

Industrial DNA
*Design for your Needs
and Applications*

Design and fabrication on demand of automatic rolling and welding machines and lines adapted to your needs, your products and production constraints.

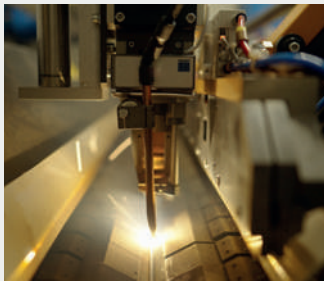

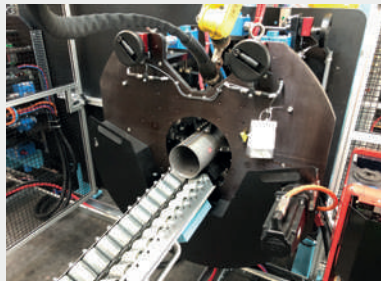

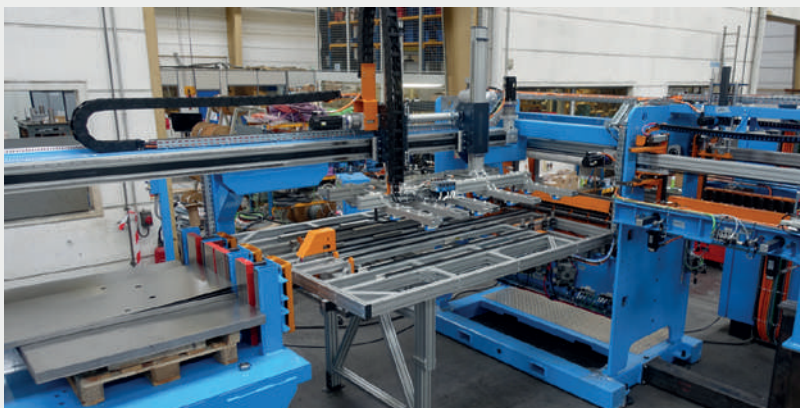

Some areas of activity and applications:

- Aeronautics
- Engine exhausts
- Fire extinguishers,
- Storage and /or pressure tanks
- Pump housings,
- Water heaters...

► **Roll bending Machines** with a specialized 3 roller design, fully digitalized, based on over 60 years of JAMMES technologies.

For Steel, Stainless, Aluminum, Zinc, Titanium or Inconel sheets, ranging from 0,5 - 10mm thick and up to 3m long, 600 parts/h.

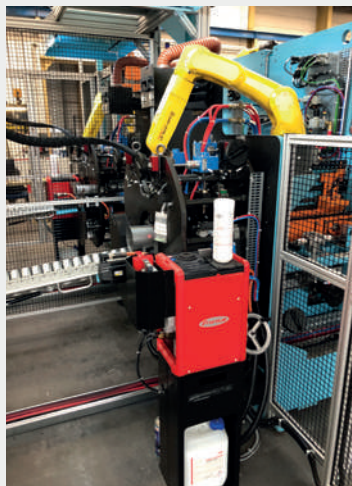

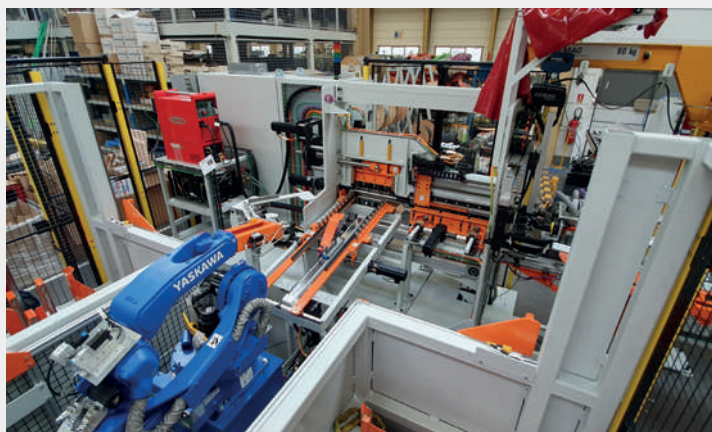

- Rolling in one single turn
- Creation of cylindrical, oval, square or other shape with different radii
- Quick diameter change without tools,
- Easy to use and operator friendly

► **Automatic rolling and seam welding lines** or shell production from sheet metal.

A variety of rolling and welding lines piece by piece or continuously. (Medium to Very large series, 10 to 300 parts/h).

Welding processes: Mig, Tig, Plasma, Submerged arc, Laser.

SPECIFIC WELDING INSTALLATIONS

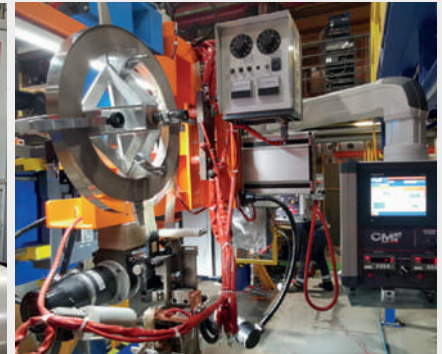

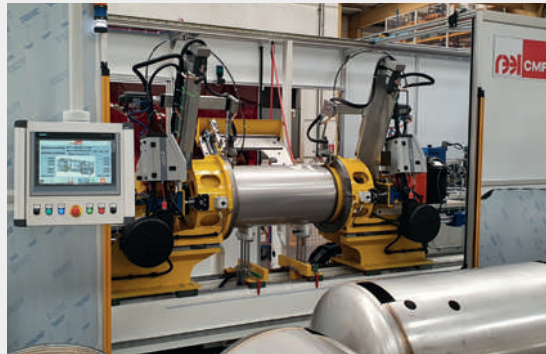

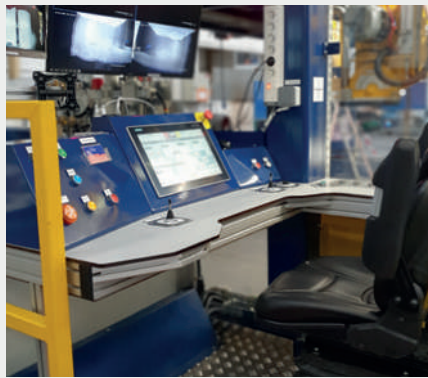

► **Global Turnkey Welding Solutions**, including :

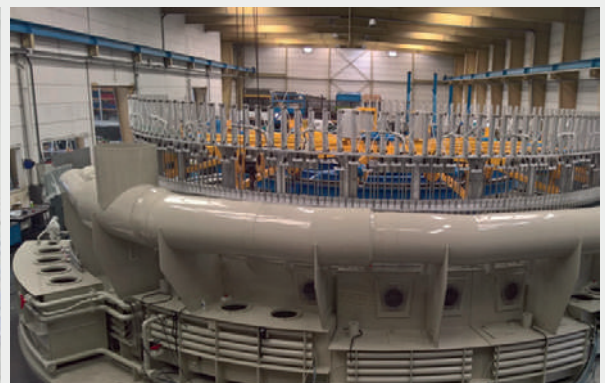

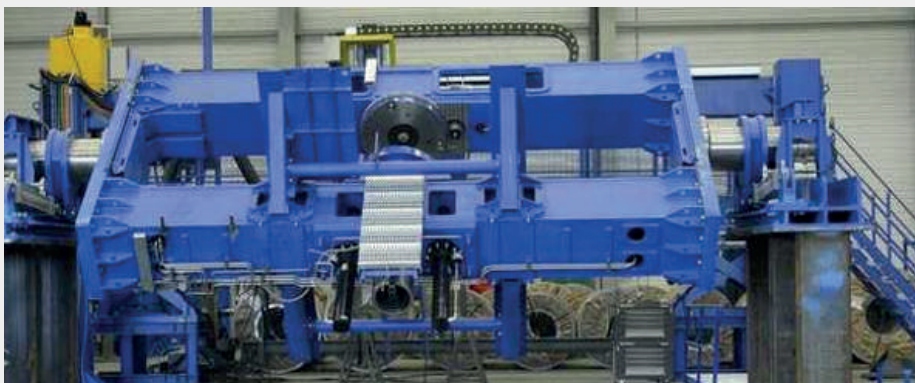

- Welding or cladding heads, Narrow GAP heads,
- Flux supply and recycling units,
- Parts referencing tools : positioners, turners...
- Heating Equipment,
- Structures supporting the welding heads (carriages, jib, gantry...),
- Operator access and workstations (platform, cabin, cockpit),
- Control units for the welding process (seam follow-up unit, control camera, speed regulation, supervision).

Welding processes: Mig, Tig, Plasma, Submerged arc, Laser.

- Several applications implemented in Automotive industry, HVAC, Ship building, train construction, Nuclear boiler making workshop.

- **Custom Machines**, prototypes and automatic production lines from a specification or expression of needs.
